## 1. Features and Specifications

## Features

- Provides total 39 Timings and 39 Patterns
- Supports HDCP signal verification pattern (P39)
- On-panel LED display and LED indicators
- Remote control
- Supports RS-232 control, specific PC application included

## Specifications

- HDMI v1.2, HDCP 1.1 and DVI 1.0 compliant
- HDMI Frequency bandwidth: 1.65Gbps (single link)
- Input: Audio L/R $\times 1$ and Toslink S/PDIF $\times 1$
- Output: HDMI female port (type A connector) $\times 1$
- Power Supply: 5VDC 2.6A power supply (AC 90-240V)
- Weight: 1.5 Kgs
- Dimensions: $280(\mathrm{~W}) \times 130$ (D) $\times 44$ (H) mm

RS-232 Protocol

| Pin | Definititon |  | Pin | Definition |
| :---: | :---: | :---: | :---: | :---: |
| 1 | NC |  | 1 | NC |
| 2 | TxD |  | 2 | RxD |
| 3 | RxD |  | 3 | TxD |
| 4 | NC | $\rightarrow$ | 4 | NC |
| 5 | GND | 4 | 5 | GND |
| 6 | NC |  | 6 | NC |
| 7 | NC |  | 7 | NC |
| 8 | NC |  | 8 | NC |
| 9 | NC |  | 9 | NC |

## 2. Front Panel Operation

1. Pattern Selection:

From P01 ~ P39
2. Resolution/Freq. Selection:

From T01~T39
3. Remote control sensor
4. HDCP LED Indicator:

The LED will illuminate when pattern "P39 HDCP-Produce" is selected and the output display (TV, monitor, etc.) supports HDCP. To unilluminate the HDCP indicator (Switch Off HDCP), frist step to change to other pattern and then changed either Timing, HDMI/DVI output selection or color space selection.
5. Display of PATTERN/TIMING:

Upper line: Number of TIMING, Resolution and Frequency (Example: T01 $640 \times 480-60$ )
Lower line: Number of PATTERN and name of PATTERN (Example: P01 WHITE)
6. Audio Source Selection:

External L/R
External Optical
Internal Sinewave
7. HDMI/DVI Output Selection
8. Turn on/off AUTO pattern random-cycling
9. Color Space Selection:

RGB 4:4:4
YUV 4:4:4
YUV 4:2:2

## 3. Rear Panel Installation and Connection

1. RS232 Communication Port:

Connect to the COM1 or COM2 port of your PC, and control the unit remotely using the application provided.
2. Audio Optical Input
3. Audio L/R Input
4. Power Switch
5. Fill-Screen Button:

For some modals of TV/monitor, the video signal can not fill the screen of display completely, to correct this problem, press the button once when the power is on.
6. HDMI OUT:

The HDMI output can be connected to a HDMI display using HDMI cable, or to a DVI display using HDMI to DVI cable.

## 5. TIMING Table

| No. | Resolution | Frequency ( Hz ) |
| :---: | :---: | :---: |
| 101 | $640 \times 480$ | 60 |
| T02 | $640 \times 480$ | 72 |
| T03 | $640 \times 480$ | 75 |
| T04 | $640 \times 480$ | 85 |
| T05 | $800 \times 600$ | 56 |
| T06 | $800 \times 600$ | 60 |
| 107 | $800 \times 600$ | 72 |
| T08 | $800 \times 600$ | 75 |
| T09 | $800 \times 600$ | 85 |
| T10 | $1024 \times 768$ | 60 |
| T11 | $1024 \times 768$ | 70 |
| T12 | $1024 \times 768$ | 75 |
| T13 | $1024 \times 768$ | 85 |
| T14 | $1280 \times 960$ | 60 |
| T15 | $1280 \times 960$ | 85 |
| T16 | $1280 \times 1024$ | 60 |
| T17 | $1280 \times 1024$ | 75 |
| T18 | $1280 \times 1024$ | 85 |
| T19 | $1600 \times 1200$ | 60 |
| T20 | $1920 \times 1200$ | 60 |
| T21 | $720 \times 480 \mathrm{i}$ | 59 |
| T22 | $720 \times 480 i$ | 60 |
| T23 | $720 \times 480 \mathrm{p}$ | 59 |
| T24 | 720x480p | 60 |
| T25 | 1280x720p | 59 |
| T26 | 1280×720p | 60 |
| T27 | $1920 \times 1080 \mathrm{i}$ | 59 |
| T28 | $1920 \times 1080 \mathrm{i}$ | 60 |
| T29 | 1920×1080p | 59 |
| T30 | 1920×1080p | 60 |
| T31 | $720 \times 576 i$ | 50 |
| T32 | $720 \times 576 \mathrm{p}$ | 50 |
| T33 | 1280×720p | 50 |
| T34 | $1920 \times 1080 \mathrm{i}$ | 50 |
| T35 | 1920×1080p | 50 |
| T36 | $1920 \times 1080 \mathrm{p}$ | 23 |
| T37 | 1920×1080p | 24 |
| T38 | $1366 \times 768$ | 60 |
| T39 | $1366 \times 768$ | 50 |

| No. | Signal Content | Description |
| :---: | :---: | :---: |
| P01 | PURITY | Purity pattern <br> Purity offers eight different full field patterns: <br> Black, White ( $100 \%$ Y) <br> Primary colors: Red, Green, Blue <br> Complementary colors: Magenta, Yellow, Cyan <br> P01: White <br> P02: Blue <br> P03: Red <br> P04: Magenta <br> P05: Green <br> P06: Cyan <br> P07: Yellow <br> P08: Black |
| P02 | PURITY |  |
| P03 | PURITY |  |
| P04 | PURITY |  |
| P05 | PURITY |  |
| P06 | PURITY |  |
| P07 | PURITY |  |
| P08 | PURITY |  |

Application

1. The red and green patterns are most frequently used for checking color purity. The red pattern is selected only this color should be visible; the presence of any other color is an indication that color purity needs adjustment.
2. The green pattern provides a purity check for three in-line tubes. In the in-line tubes, the guns are in a horizontal position and the green gun is located in the center.
3. The blue is the complementary colors are often used to check the color performance.
4. The red are used to ensure that there is no interference between the sound and chroma carrier. Furthermore the red pattern is used to adjust the longplay delay level to minimum flicker.
5. In addition to the primary and complementary colors $100 \%$ white can be selected as well as black pattern with color burst to check.

| P18 | WWTITI | Black-White Vertical <br> Full screen linear vertical bar signal with black/white intervals of $1 / 6 / 12$ pixels. |  |
| :---: | :---: | :---: | :---: |
| P19 | Wer\|iv] |  |  |
| P20 |  | P19: 6 pixels <br> P20: 12 pixels |  |
| Application |  |  |  |
| This pattern serves for a quick check of color monitor's horizontal bandwidth and phase behavior of a video transmission. Also, verify video amplifier and color temperature. |  |  |  |
| P21 |  | Black-White Horizontal <br> Full screen linear Horizontal bar signal with black/ white intervals of $1 / 3 / 6$ pixels. |  |
| P22 |  | P21: 1 pix |  |
| P23 |  | P22: 3 pixels <br> P23: 6 pixels |  |
| Application |  |  |  |
| This pattern serves for a quick check of color monitor's vertical bandwidth and phase behavior of a video transmission. Also, verify video amplifier and color temperature. |  |  |  |
| P24 | Ww] | Multi-burst Full screen definition pattern of frequencies 0.5, 1.0, 2.0, 4.0, 4.8 , and 5.8 MHz for 625 line systems. <br> P24: Multi-burst 1 P25: Multi-burst 2 | -Video bandwidth -Check luminance amplifier in B/W |
| P25 |  |  | -Amplitude response/ resolution <br> -Check resolution of monitors and video recorders -Measure the frequency amplitude response |
| Application |  |  |  |
| The pattern checks the bandwidth of the video or luminance amplifier in $B$ / W or CTVs as well as the resolution of monitors and video recorders. It can also be used to check or measure the frequency amplitude response. |  |  |  |

| P26 | Grid <br> Full screen grid with black/white intervals of $1 / 3 / 6 / 12$ <br> pixels. |  |
| :--- | :--- | :--- |
| P27 | P26: 1 pixel <br> P27: 3 pixels <br> P28: 6 pixels <br> P29: 12 pixels |  |
| P28 |  | P29 |
| Application | Running H <br> Full screen filled with lines of $H$ characters, a new <br> line of H will run from upper left corner and fill down <br> when a line is completed. |  |
| This pattern is mainly used for checking and aligning dynamic and corner |  |  |
| convergence of TVs or monitors. |  |  |

$\begin{array}{|l|c|l|l|}\hline \text { P33 } & \text { CYP } & \begin{array}{l}\text { Cypress Patterns } \\ \text { Cypress specifically designed patterns. }\end{array} \\$\cline { 1 - 2 } P34 \& CYP \& $\left.\begin{array}{l}\text { P33: Greyscale } \\ \text { P34: 3 step Horizontal color bar } \\ \text { P35: SAMPTEbar }\end{array} \\ \hline \text { P35 } & \text { CYP: CYP-4 } \\ \text { P37: Britebox-1 } \\ \text { P38: EDID }\end{array}\right]$

## 6. Remote Control

1. Switch to P39 HDCP
2. Turn on/off AUTO pattern random-cycling
3. Color Space Selection:

RGB 4:4:4
YUV 4:4:4
YUV 4:2:2
4. Audio Output Selection:

External L/R
External Optical
Internal Shinewave
5. HDMI/DVI Output Selection
6. Quick TIMING Selection:

VGA - T01 $640 \times 480-60$
SVGA - T06 800×600-60
XGA - T10 1024×768-60
SXGA - T16 1280×1024-60
UXGA - T19 1600×1200-60
1080i-T27 1920×1080i-59
480p - T23 720x480p-59
720p - T25 1280×720p-59
1080p-T29 1920x1080p-59
7. Sampling Rate (-)

Sampling Rate ( + )

## 8. RS232 Remote Control Application

### 8.1 Main Window

Double-click the executable exe file to launch the application, the main window will show up.

IMPORTANT: When the right hand bottom shows warning message 'CPHD-1 Status: Not Exit, clicking the Connect 倌 button to link to the unit.

### 8.2 Select COM port to control

Click and select the [COM port] from [Config] option of the tool bar to launch the Program window. There are 8 different COM ports can choose. After the port been selected click [OK] to confirm the control port.

### 8.3 Switch TIMING

Click and select the [Timing] from [Output] option of the tool bar to launch the Program window.
Click [Show List] to display each timing's Horizontal/Vertical/Pixel Clock. Click [Run Timing] button to start the output of selected timing.

List of Timings
Bryortimit

| Timing Nane | Pixelfate | Horizortal | Yeticel |
| :---: | :---: | :---: | :---: |
| 640,480.60 | 25.175 MHz | 31.469 kHz | 59.940 Hz |
| 640x480-72 | 31.500 MHz | 37.861 kHz | 72.809 Hz |
| $640 \times 480.75$ | 131.500 MHz | 37.500 KHz | 75.000 Hz |
| 640x480-85 | 36000 MHz | 43.269 KHz | 85.008 Hz |
| 800x600-56 | 36.000 MHz | 35.156 KHz | 56.250 Hz |
| 7800x600-60 | 40.000 MHz | 37.879 KHz | 60.317 Hz |
| $800 \times 600.72$ | 50.000 MHz | 48.077 KHz | 72.188 Hz |
| $800 \times 600-75$ | 49.500 MHz | 46.875 KHz | 75.000 Hz |
| 800x600-85 | 66.250 MHz | 53.674 KHz | 85.061 Hz |
| 1024×768-60 | 65.000 MHz | 48.363 KHz | 60.004 Hz |
| $1024 \times 768.70$ | 75.000 MHz | 56.476 KHz | 70.069 Hz |
| -1024x,768-75 | 18.750 MHz | 60.023 KHz | 75.029 Hz |
| 1024×768-85 | 94.500 MHz | 68.677 KHz | 84.997 Hz |

### 8.4 Switch PATTERN

Click and select the [Pattern] from [Output] option of the tool bar to launch the Program window.
Click [Show List] to select output pattern and then click [Run Pattern] button to start the output of selected pattern.

List of Patterns

### 8.5 Programming TIMING/PATTERN

Click and select the [Program] from [Edit] option of the tool bar to launch the Program window.

| EFMCMID |  |
| :---: | :---: |
| Fle | ERt Config Duput |
| 4 | Timing |
| Pattem |  |
| Frogran |  |
|  | Defoult Settine |

Program the desired sequence of timing/pattern/unit/show time, then click [Upload] to send the program to the unit. IMPORTANT: For every timing pattern have to shown at least 3 seconds.

Click and select the [Save as] from [File] option of the tool bar to save your settings.
Click the [Open] from [File] option of the tool bar to load the saved data.

Click and select the [Timing] from [Edit] option of the tool bar to launch the Program window.

|  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Seect | Trumg Name | Pxelfate | Horzortal | Vetical | $\cdots$ |
|  | 640x480-60 | 25.175 MHz | 31.469 kHz | 59.940 Hz |  |
| V | 640x480-72 | 37.500 MHz | 37.851 KHz | 72.809 Hz |  |
|  | 640x480-75 | 31.500 MHZ | 37.500 kHz | 75000 Hz |  |
|  | $640 \times 480-85$ | 36.000 MHz | 43.269 KHz | 85009 Hz |  |
| - 8 | $800 \times 600.56$ | 36000 MHz | 35. 156 KHz | 58.250 Hz |  |
|  | $800 \times 600.60$ | 40.000 MHz | 37.879 KHz | 60317 Hz |  |
|  | $800 \times 600-72$ | 50.000 MHz | 48.077 KHz | 72.188 Hz |  |
|  | $800 \times 60075$ | 49.500 MHz | 40.875 KHz | 75000 Hz |  |

|  | Select 4 ll |  |  | Uner |  |

Program the desired timings, and then click [Upload] to send the program to the unit.
Click and select the [Pattern] from [Edit] option of the tool bar to launch the Program window.
Program the desired patterns and then click [Upload] to send the program to the unit.

Select All
Upload

Click and select the [Default Setting] from [Edit] option of the tool bar to reset the unit to factory setting.

### 8.6 EDID

### 8.6.1 Read EDID

Click and select the [Read EDID] from [EDID] option of the tool bar to read out the EDID from the display source (e.g. LCD TV). Meanwhile, click and select the [Save as] from [File] option of the tool bar to save the EDID information to the computer in .bin format (e.g. to save as this file format "cypress.bin").

### 8.6.2 Memory of EDID

When click and select the [Memory] from [EDID] to read out the data, but the user may not know the data information that read out from the source. The user can use "Explore Semiconductor EDID Editor" to read out the EDID information.
From "Explore Semiconductor EDID Editor", click the [Open] from [File] option of the tool bar to read out the EDID data.

### 8.6.3 Upload EDID

Click the [Open] from [File] option of the tool bar to load the saved data (e.g. cypress.bin).
Click and select the [Upload EDID] from [EDID] option of the tool bar to write the EDID to the unit.
INPORTANT: After upload EDID to the unit, don't operation this unit before write EDID to the display unit. Otherwise, the EDID data will lose due to the memory size problem.

### 8.6.4 Write EDID

Click and select the [Write EDID] from [EDID] option of the tool bar to write the EDID to the display unit.
